

Run every order. Connect every team. **Know your business.**

A complete introduction to QuickServe POS, kitchen operations, omnichannel ordering and back-office management.

QUICKSERVE PRODUCT PROFILE

POS / KITCHEN / ORDERING / INVENTORY / PEOPLE / FINANCE

One system. Every service moment.

QuickServe connects front-of-house speed with kitchen execution and back-office control—without making teams repeat the same work in separate systems.

Designed for restaurants, cafés, food courts, kiosks, retail-food concepts and growing multi-outlet operators.

A faster counter, built for real service

QuickServe brings ordering, billing, payments and fulfilment into one responsive POS workspace for dine-in, takeaway and delivery operations.

Order & sell

- Fast menu and category navigation with search, SKU and barcode support
- Sizes, variants, temperatures, modifiers, add-ons and mix-and-match choices
- Dine-in, takeaway and delivery order types with notes and table assignment
- Saved bills, table layouts and bill recall for ongoing service
- Item promotions, discounts, taxes and service-charge configuration

Bill & collect

- Configurable cash, card, DuitNow and custom payment methods
- Cash tender and change calculation with clear payment confirmation
- Custom receipts and kitchen order lists with manual or automatic printing
- Reprint, collect-later and manager-approved refund workflows
- Bluetooth, Wi-Fi/LAN, USB and SUNMI built-in printer support

Operate with control

- Role-based access for vendor, cashier, manager, kitchen and order-taker teams
- Cashier shift opening, closing, cash reconciliation and shift reporting
- Live sales reports, order status tracking and customer-facing display support
- Configurable receipt, order-list, cash-drawer and payment settings

One transaction can update the kitchen, stock, sales reporting and finance records automatically.

The right item, to the right kitchen, automatically

QuickServe connects every ordering channel to a kitchen workflow designed to reduce verbal instructions, duplicate entry and missed tickets.

Kitchen routing

- Create kitchen departments such as Hot Kitchen, Drinks, Dessert or Packing
- Assign menu categories to departments so each station sees only relevant items
- Route counter, QR, tableside and online orders through the same order pipeline
- Keep non-kitchen items out of preparation queues while preserving the full bill

Kitchen Display System

- Real-time incoming orders with item notes, table and source information
- Pending, preparing, ready/served and completed progress visibility
- Kitchen-category access per staff account for focused station views
- Accept, reject and update orders with operational reasons and notes

Auto Kitchen

- Automatically accept eligible incoming orders when configured
- Automatically print kitchen tickets to the selected printer
- Apply auto-approval and auto-print rules to QR and tableside channels
- Use KDS and printed tickets together for screen-and-paper redundancy

Kitchen routing removes manual sorting and gives every station a clear, accountable queue.

Serve customers wherever they choose to order

Every channel uses the same products, prices and operational flow, giving the team one source of truth from order capture to fulfilment.

QR ordering

- Generate table QR codes for customer self-ordering
- Receive orders in an incoming-order queue with table details and remarks
- Approve manually or automatically and print on acceptance
- Send accepted items into configured kitchen routes

Tablesider ordering

- Give order takers a mobile-friendly menu on phone or tablet
- Select tables, capture item options and add service remarks at the table
- Submit directly to POS and kitchen without handwritten re-entry
- Use independent auto-approve and auto-print controls

Online shop

- Publish a shareable storefront with product images and options
- Control which products are available online
- Offer pickup, Lalamove, postage or custom delivery methods and fees
- Support cash on delivery and configured online payment choices

Counter, QR, tablesider and online orders converge into one connected operation.

Know what you sell, buy, make and use

QuickServe links the product catalogue to practical inventory controls for finished goods, ingredients, recipes, purchasing and production.

Items & catalogue

- Create, edit, archive and restore items with categories, images and descriptions
- Manage price, cost, SKU, barcode, unit of sale and stock-tracking rules
- Build modifiers, add-ons, variants, sizes and promotional pricing
- Maintain ingredient and non-menu stock such as packaging and supplies

Inventory control

- Purchase orders with status tracking and supplier records
- Transfer orders between locations or stock points
- Stock adjustments, physical counts, movement history and valuation
- Low-stock visibility and current-balance tracking by unit

Recipes & production

- Define recipe quantities and units for ingredient consumption
- Record production batches and calculate produced stock
- Deduct finished stock or recipe ingredients automatically at POS completion
- Calculate item cost from production where configured

Sales and production can drive stock movements without duplicate manual entries.

Staff, payroll, claims and leave in one place

QuickServe gives operators a practical HR workspace connected to access control, payroll expense records and day-to-day workforce administration.

Staff management

- Create staff accounts for cashier, kitchen, order taker, manager and HR roles
- Maintain employee codes, employment status, job details and contact information
- Organise departments and assign kitchen-category access
- Store bank, EPF and SOCSO information with salary and overtime setup

Payroll & payslips

- Prepare payroll by pay period using reusable employee templates
- Calculate basic pay, overtime, allowances, bonuses and commissions
- Record EPF, SOCSO, EIS, PCB/tax, unpaid leave and other deductions
- Track employer contributions and generate, copy, print or download PDF payslips
- Sync payroll totals into staff expenses for financial reporting

Claims & leave

- Create multi-line staff claims with type, receipt reference, notes and payment method
- Sync approved claim records into the Staff / Claims expense category
- Manage annual, medical, hospitalisation, paternity and other leave
- Track scheduled, approved, completed and cancelled leave with balances
- Set leave entitlements, including annual-leave levels by service year

Operational roles, employee records and financial impact stay connected.

Turn daily activity into decisions

Live operational records flow into dashboards, expenses, finance summaries and detailed reports so owners can understand performance without rebuilding spreadsheets.

Dashboard & sales reports

- Monitor sales, orders, average order value and cancellations
- Analyse sales by hour, day, week or month
- Review sales by item, category, employee, payment method and modifier
- Report discounts and taxes with date filters and export-ready views

Expenses & accounting

- Record and categorise cost of goods sold (COGS) and operating expenses (OPEX)
- Bring platform fees, payroll and staff claims into the expense ledger
- Review total revenue, expenses, gross profit and net profit
- Generate Profit & Loss, expense-breakdown and monthly-comparison reports

Contacts & audit trail

- Maintain supplier contacts for purchasing and customer records for service
- Review inventory movement, order, shift and payment histories
- Use consistent records across sales, stock, expenses and finance

QuickServe turns transactions into a connected operational and financial record.

Control the business as it grows

The administration workspace supports multi-vendor platform operations, commercial management and the controls needed to run QuickServe at scale.

Business administration

- Manage vendors, restaurants and hubs with availability and account controls
- Monitor platform income and operational reports
- Manage vendor subscriptions, plans, renewals and feature access
- Handle cashout records and DuitNow payment administration

Commercial tools

- Create quotations and invoices with branded PDF output
- Operate the QuickServe shop and product catalogue
- Publish announcements and product updates to operators
- Maintain guides, setup references and sales documents

System control

- Review system data and administrative records
- Apply role-based access and feature-level configuration
- Support multiple currencies, tax settings and outlet-specific preferences
- Use responsive web access across desktop, tablet and mobile devices

QuickServe can support a single outlet today and a wider operating network tomorrow.

Everything connected.

From first tap to final report, QuickServe gives every team the tools to move faster with less duplicate work.

Sell

POS, billing, discounts, payments, receipts, refunds, shifts
