Practical technology, built around real business work.

QuickServe is developed by Lumora Tech Ent., a Malaysian technology company. We turn the daily work of taking orders, preparing food and managing a business into one clear, connected experience.

OUR STORY

Lumora Tech began as a trusted device service provider. Working closely with business owners taught us a simple lesson: good technology should reduce everyday pressure, not add another complicated process. QuickServe brings that lesson into restaurant operations.

1

Our mission

Make powerful restaurant operations accessible, so teams can serve faster, work with confidence and grow with better control.

2

Our vision

Help local businesses become more connected, data-informed and ready to scale without losing the human side of service.

3

Our promise

Provide practical tools, clear support and continuous improvements that create measurable value in daily operations.

A restaurant is one operation. Its systems should work that way too.

Many businesses use separate tools for selling, kitchen tickets, stock sheets, staff records and finance. QuickServe connects those moments so information can move with the order.

SEE IT IN ONE ORDER

Table 12 scans the QR menu. Drinks route to the drinks station, mains to the hot kitchen, payment closes the bill, and the sale updates stock and reports automatically.

Choose a platform that removes work—not another screen to manage.

The real cost of a system is not only its subscription. It is the repeated entry, manual checking and disconnected decisions it leaves behind.

DECISION AREA	QUICKSERVE	COMMON ALTERNATIVE
More than checkout	POS, kitchen, ordering, stock, people and finance work as one operating flow.	A cashier-only system records sales but leaves the rest of the business in separate tools.
Back office included	The Basic plan already includes back-office management and performance reports.	Many systems reserve deeper management tools for higher plans or separate add-ons.
Built for existing devices	Browser-first access supports desktop, tablet and mobile workflows without forcing one hardware format.	Hardware-led packages can create a larger upfront decision before the workflow is proven.
Deeper people operations	Manage staff, departments, payroll, statutory deductions, claims, leave and PDF payslips.	Typical POS staff tools often stop at user access, attendance or sales performance.
Operational accounting	Connect sales with COGS, OPEX, payroll, claims, gross profit, net profit and P&L.	Disconnected stacks require exports and repeated entry before the owner sees the full picture.
Grow by workflow	Start with counter POS, add QR and tableside, then introduce full kitchen routing when needed.	A one-size package may charge for complexity before the operation is ready to use it.

The QuickServe difference: operational depth at a practical starting price, with room to add workflow complexity when the business is ready.

PART 1

POS & Service Operations

Everything that happens from the customer's first order to kitchen fulfilment, payment and completion.

1

Take orders quickly at the counter with flexible menus, billing and payments.

2

Let guests scan a QR or staff order tableside without duplicate entry.

3

Route food, drinks and desserts to the correct kitchen team automatically.

4

Extend service online, print where needed and keep every order connected.

When the queue grows, service should keep moving.

QuickServe turns a busy counter into a clear, repeatable sales flow—from the first item to the final receipt.

THE PEAK-HOUR SITUATION

Lunch begins, the queue reaches the door and every order is different. One customer wants takeaway, another is dining in, and the next has modifiers, a promotion and a different payment method. Staff need speed, but the business still needs every bill to be accurate.

HOW QUICKSERVE HANDLES IT

1

Build the order quickly

The cashier selects products from a visual menu, then adds sizes, variants, temperatures, modifiers, add-ons and notes without leaving the sale screen.

2

Choose how it will be served

The order is marked dine-in, takeaway or delivery.

3

Apply the right commercial rules

QuickServe calculates configured promotions, discounts, taxes and service charges consistently, reducing manual calculation at the counter.

4

Collect and complete

The cashier selects cash, card, DuitNow or another enabled method.

THE BUSINESS RESULT

Customers move through the queue faster, staff follow one consistent process, and management receives a clean transaction record for reporting, stock and finance.

Every item reaches the right station—without shouting across the kitchen.

QuickServe organises preparation around the way your kitchen actually works.

#A106

DESSERT

READY

THE MIXED-ORDER SITUATION

A single table orders grilled food, two drinks and dessert. In a manual workflow, one ticket is passed between stations or the cashier must explain the order verbally. During a rush, items can be missed, duplicated or prepared in the wrong sequence.

HOW QUICKSERVE HANDLES IT

1

Map the kitchen

Create departments such as Hot Kitchen, Drinks, Dessert and Packing, then assign the relevant menu categories to each department.

2

Route each item automatically

When an order arrives from POS, QR, tableside or online shop, QuickServe separates the items and sends each one to its responsible station.

3

Make progress visible

Kitchen staff see only the orders relevant to their station on the Kitchen Display System and update them from pending to preparing, ready or served.

4

Automate the repetitive work

Auto Kitchen can accept eligible incoming orders and print kitchen tickets automatically, while KDS and paper tickets can operate together when required.

THE BUSINESS RESULT

Each station has an accountable queue, front-of-house can see progress, and the kitchen spends less time sorting tickets or asking what should be prepared next.

Give guests convenience without losing operational control.

Let customers self-order or let staff take the full POS experience to the table.

THE FULL DINING-ROOM SITUATION

All servers are occupied, a new table is ready to order and another table wants to add drinks. Guests wait for attention while staff walk between tables and the counter, then re-enter handwritten orders into the POS.

HOW QUICKSERVE HANDLES IT

1

Choose the service style

Place a generated QR code on each table for self-ordering, or give an order taker a mobile-friendly QuickServe screen on a phone or tablet.

2

Capture a complete order

Guests or staff browse the same menu and pricing, choose item options, enter quantities and remarks, and submit against the correct table.

3

Review or approve automatically

Incoming orders can wait for staff approval or follow configured auto-approval rules.

4

Send it into normal operations

Approved items enter the same kitchen routes and order-status flow as counter orders, so the team does not operate a separate system.

THE BUSINESS RESULT

Guests order sooner, servers spend more time on hospitality, and the business can increase ordering capacity without adding another cashier station.

Turn your menu into a direct ordering channel.

QuickServe helps the business accept orders beyond the counter through a branded, shareable storefront.

YOUR DIRECT ONLINE SHOP

THE OFF-PREMISE SITUATION

Customers discover the business through social media or a recommendation, but ordering still happens through messages. Staff must confirm products, delivery, payment and totals manually—often while serving walk-in customers.

HOW QUICKSERVE HANDLES IT

1

Publish the right catalogue

Choose which products appear online and present them with images, descriptions, prices and available options from the QuickServe catalogue.

2

Let customers build the basket

Customers order through a shareable link, select product choices and review the total without waiting for a staff member to reply.

3

Offer practical fulfilment

Configure pickup, Lalamove, postage or custom delivery methods with the appropriate fees and availability.

4

Bring the order into one operation

Use cash on delivery or configured online payment choices, then manage the order alongside the outlet's other incoming orders.

THE BUSINESS RESULT

The business gains a direct sales channel, customers receive a clearer buying experience, and staff avoid copying orders from chat into operational systems.

Start with the workflow you need today.

All plans include a 30-day free trial. Upgrade from counter POS to customer ordering and full kitchen integration as the operation grows.

Back Office & Business Control

The management layer behind every sale—designed to help owners control products, stock, people, cost and performance.

1

See the business through live dashboards, item analytics and custom periods.

2

Manage purchasing, recipes, production, stock counts and valuation.

3

Run staff records, payroll, claims, leave, payslips and cashier shifts.

4

Understand sales, COGS, expenses, profit and loss, and exportable reports.

Understand what was bought, produced and consumed.

QuickServe connects everyday sales with the stock activity behind them.

MOVEMENTS

Chicken Fillet

Cooking Oil

Packaging

THE STOCK-CONTROL SITUATION

Sales look healthy, yet ingredients run out unexpectedly and food cost is difficult to explain. Purchases live in one spreadsheet, production in a notebook and sales in the POS, leaving the owner without a dependable stock picture.

HOW QUICKSERVE HANDLES IT

1

Structure what the business holds

Track finished items, ingredients, packaging and supplies with their own units, balances, thresholds, SKU, barcode and cost information.

2

Record stock coming in and moving

Create purchase orders, receive from suppliers, transfer stock, make controlled adjustments and perform physical inventory counts.

3

Describe how products are made

Create recipes with ingredient quantities and record production batches when raw materials become finished stock.

4

Let sales create stock movement

At completed checkout, QuickServe can deduct the available finished stock or consume the recipe ingredients required for the quantity sold.

THE BUSINESS RESULT

Operators gain a traceable view of purchasing, production and usage, helping them respond earlier to shortages and understand the cost behind each sale.

Manage the people behind the operation with less paperwork.

QuickServe connects workforce administration with access, expenses and payroll records.

THE MONTH-END SITUATION

The manager is checking staff details, leave, overtime, claims and salary deductions across messages and spreadsheets. At the same time, every employee needs the correct system access and a clear payslip.

HOW QUICKSERVE HANDLES IT

- 1

Create the team structure

Maintain staff profiles, employment details and departments, then assign operational roles such as cashier, kitchen, order taker, manager or HR.
- 2

Control access to work

Each role receives the relevant workspace, while kitchen staff can be limited to their assigned categories or departments.
- 3

Manage claims and leave

Record multi-line claims with receipt references and payment methods, and manage annual, medical, hospitalisation, paternity and other leave with status and balance tracking.
- 4

Prepare payroll and payslips

Calculate basic pay, overtime, allowances, bonuses and commissions, then record EPF, SOCSO, EIS, PCB/tax, unpaid leave and other deductions before issuing a PDF payslip.

THE BUSINESS RESULT

Management keeps a clearer employee record, staff receive consistent documents, and payroll and claim totals can flow into business expenses instead of being entered again.

See what happened, why it happened and what needs attention next.

QuickServe combines an advanced analytical dashboard, detailed item intelligence and financial reporting in one decision workspace.

HOW QUICKSERVE HANDLES IT

- 1 Start with advanced analytics**

Use today, week, month or a custom date range to review total sales, orders, average order value, cancellations, daily sales, payment mix, hourly demand and top-selling items.
- 2 Investigate every item**

Review unique items, total units, item revenue, average selling price and top performers, then continue into category, employee, payment, modifier, discount and tax reports.
- 3 Bring costs into view**

Record expenses as cost of goods sold or operating expenses, including linked platform fees, payroll and staff claims.
- 4 Generate and share the report**

QuickServe automatically builds professional PDF, Excel-compatible and CSV exports for deeper analysis, record keeping or management review.

THE BUSINESS RESULT

Owners can move from “we were busy” to evidence-based decisions about menu performance, staffing, costs and growth.

Start with one outlet. Build for what comes next.

QuickServe provides the operational foundation and administration tools to support a growing business network.

PLATFORM ADMINISTRATION

ACTIVE

Subscriptions & renewals

Quotations & invoices

Cashout & DuitNow

THE GROWTH SITUATION

A business expands from one counter to multiple teams, outlets or vendor locations. Different operating practices, subscriptions and records make it harder to maintain consistency and visibility at platform level.

HOW QUICKSERVE HANDLES IT

1

Standardise outlet operations

Use consistent ordering, kitchen, inventory, people and reporting workflows while retaining outlet-specific menus, settings and feature access.

2

Manage the commercial relationship

Admin teams can manage vendors, restaurants, hubs, subscriptions, renewals, plans, cashout and DuitNow records.

3

Create professional documents

Prepare branded quotations and invoices, maintain setup guides and share commercial product material from the document library.

4

Stay connected to operators

Publish announcements, manage platform records and support responsive access across desktop, tablet and mobile devices.

THE BUSINESS RESULT

The organisation gains a repeatable operating model with the controls needed to support new teams and locations without rebuilding the system each time.

Every payment belongs to an accountable cashier shift.

Control opening, checkout access, payment totals, drawer reconciliation and the final shift record in one workflow.

01

Open with accountability

Capture cashier, opening amount and start time.

02

Enforce the active shift

Block payment completion when no cashier shift is open.

03

Reconcile the drawer

Compare expected and counted cash with payment-method totals.

04

Close with evidence

Retain transactions and generate PDF or CSV shift reports.

RESULT

Faster closing, clearer cash responsibility and a complete record for every cashier session.

Everything behind the menu and stock.

A complete view of the functions available from the QuickServe Back Office.

Dashboard & control centre

See the health of the outlet before opening another report.

- Sales, order count, average order and cancellations
- Today, week, month and custom date views
- Sales trend, order status and top-product visibility
- Responsive owner access from desktop or tablet

Items, menu & stock setup

Maintain one sellable catalogue with the operational detail behind it.

- Categories, images, descriptions, prices and costs
- SKU, barcode, sold-by unit and stock-tracking rules
- Sizes, temperatures, variants, modifiers and add-ons
- Mix-and-match choices, promotions and discounts
- Archive, restore and control online availability
- Auto-cost from production where configured

Inventory & production

Trace stock from purchasing to production and final sale.

- Purchase orders and supplier purchasing history
- Transfer orders between stock points or locations
- Stock adjustments with reason and movement history
- Physical inventory counts and variance control
- Ingredient and non-menu supply management
- Recipes, unit conversion and checkout consumption
- Production batches and finished-goods stock
- Inventory history, low-stock thresholds and valuation

Staff management

Connect employee records with the access and responsibilities of the role.

- Cashier, kitchen, order-taker, manager and HR accounts
- Employee code, job title, status and hire information
- Departments and kitchen-category assignment
- Contact, address and emergency information
- Bank, EPF and SOCSO details
- Salary, overtime and leave-entitlement templates

Everything behind the team and the numbers.

A complete view of the functions available from the QuickServe Back Office.

Payroll, claims & leave

Turn month-end people administration into a documented workflow.

- Basic pay, overtime, allowances, bonus and commission
- EPF, SOCSO, EIS, PCB/tax and unpaid-leave deductions
- Employer contributions and other adjustments
- Create, copy, edit, print and download PDF payslips
- Multi-line claims with receipt references and payment method
- Claims and payroll synced into staff expenses
- Annual, MC, hospitalisation, paternity and other leave
- Leave status, balance and annual levels by service year

Sales reports

Move from total sales to the reason behind performance.

- Advanced KPI dashboard with custom period selection
- Daily sales, payment mix, hourly demand and top items
- Item quantity, revenue, average price and top-10 chart
- Sales by item and by category
- Sales by employee and payment method
- Sales by modifier
- Discount and tax reporting
- Hourly, daily, weekly and monthly analysis
- Automatically generated PDF, Excel-compatible and CSV exports

Expenses & finance

Read revenue and cost together instead of managing two separate stories.

- Categorised COGS and OPEX expense ledger
- Platform subscriptions, payroll and claim entries
- Revenue, total expenses, gross profit and net profit
- Profit & Loss statement
- Expense breakdown and monthly comparison

Contacts, shifts & records

Keep the supporting records that daily operations depend on.

- Supplier directory connected to purchasing
- Customer contact records
- Cashier shift opening and closing
- Require an active shift before payment can be completed
- Opening float and payment-method totals
- Expected cash, counted cash and variance reconciliation
- Shift transaction history with cashier accountability
- PDF and CSV shift reports
- Order, payment, refund and stock movement histories

LET'S BUILD A BETTER SERVICE FLOW

Your next order can do more.

QuickServe is not only a place to record a sale. It is the connection between the customer, the service team, the kitchen and the decisions made after closing time.

Faster service

Give staff a clear workflow for every channel.

Better coordination

Route information to the right people automatically.

Stronger control

Connect stock, people, expenses and reporting.

Room to grow

Add capabilities as the operation becomes more complex.
